Funnel Pushcore**

The graph displays several curves representing grain size distributions. All curves show a primary peak at a small grain size (approximately 100 microns) and then taper off towards zero as the grain size increases. The peak heights vary, with the highest curve reaching a value of about 9.2 on the y-axis. The x-axis is labeled 'Grain Size (microns)' and ranges from 0 to 2500. The y-axis ranges from 0 to 14.
