The graph displays several curves representing grain size distributions. The x-axis, labeled 'Grain Size (microns)', ranges from 0 to 2500 with major ticks every 500 units. The y-axis, ranging from 0 to 14, represents an unlabeled quantity. Most curves show a primary peak between 100 and 200 microns, with peak values between 12 and 13.5. One curve has a secondary, lower peak around 400 microns. All distributions are concentrated below 600 microns.
